

HCI & COMPUTER GRAPHICS

Mini Assignment: Deconstructing HCI & CG in Daily Software

Name: Muhammad Mubashir

Subject: HCI & Computer Graphics

Roll No: 2K24/CSE/100

Submitted To: Mr. Rajesh Kumar

1. Objective

Demonstrate your understanding of the difference between Human-Computer Interaction (HCI) and Computer Graphics (CG) by visually annotating and analyzing an interactive 3D digital tool of your choice.

2. Assignment Execution

STEP 1: APP SELECTION

Selected Interactive 3D App: PUBG MOBILE

STEP 2: INTERACTIVE SCREENSHOTS & ANNOTATIONS

Slide / Image 1 (HCI Focus)

- 1) Chat Button: Used to voice chat and message teammates.
- 2) Scope Button: Used to enable scope and aim.
- 3) Jump Button: Used to jump your character.
- 4) Shoot Button: Used for shooting.
- 5) Prone Button: Used for lying down on ground and aim for enemies.
- 6) Crouch Button: Used to crouch and get cover.
- 7) Reload Button: Used to reload your weapon.
- 8) Weapon: Selecting Weapon.
- 9) Health Bar: Used to see your health bar.
- 10) Joystick: Used for movement of player.
- 11) Inventory: Used to access Inventory

3. Reflection Questions

1. How does the Computer Graphics quality (e.g., realistic lighting or 3D view) help or hinder the user's ability to interact with the software?

Answer: High-quality Computer Graphics in PUBG helps interaction because realistic lighting, shadows, textures, perspective, and 3D environments help the player understand depth, distance, objects, and surroundings. However, very high graphics quality can require more hardware resources and may reduce game performance on weaker devices.

2. What is one simple HCI change you would make to improve the user interface?

Answer: One simple HCI improvement would be to provide clearer labels or explanations for important HUD elements, especially for new players. This would help players understand the interface more quickly and interact with the game more effectively.
